Important Information

Performance data does not reflect your individual account performance but reflects assets in the DCF Intermediate-Term Index Pool. For account performance please refer to your individual statement. As of the close of business on 7/31/2019, the Total Index Composition is as follows: 41.0% Russell 1000 Index, 40.0% Bloomberg Barclays US Agg Bond Index, 12.0% MSCI All Country World ex US Index (Net), 7.0% Russell Small Cap Completeness Index. Historical index composition is found in the additional disclosures. Since Inception is 6/30/2017.

Total Portfolio Return-Net of Fund Expenses performance numbers reflect the impact of fund level management fees, sub-advisor fees (if applicable) and other administrative and operating expenses charged by the funds. Such performance numbers do not reflect the impact of account level management (OCIO) fees charged to the client pursuant to the terms of the investment management agreement with SIMC, which will reduce performance. Net portfolio performance information is available upon request to your client service representative. In addition, net of fee performance does not includeany additional fees charged by the foundation.

This presentation is provided by SEI Investments Management Corporation (SIMC), a registered investment adviser and wholly owned subsidiary of SEI Investments Company. The material included herein is based on the views of SIMC. Statements that are not factual in nature, including opinions, projections and estimates, assume certain economic conditions and industry developments and constitute only current opinions that are subject to change without notice. Nothing herein is intended to be a forecast of future events, or a guarantee of future results. This presentation should not be relied upon by the reader as research or investment advice (unless SIMC has otherwise separately entered into a written agreement for the provision of investment advice).

There are risks involved with investing including loss of principal. There is no assurance that the objectives of any strategy or fund will be achieved or will be successful. No investment strategy, including diversification, can protect against market risk or loss. Current and future portfolio holdings are subject to risk. Past performance does not guarantee future results.

Through June 30, 2012, annual performance is calculated based on monthly return streams, geometrically linked. From June 30, 2012 onward, annual performance is based upon daily return streams, geometrically linked as of the specific month end.

Index returns are for illustrative purposes only and do not represent actual fund performance. Index performance returns do not reflect any management fees, transaction costs, or expenses, which would reduce returns. Indexes are unmanaged and one cannot invest directly in an index.

Current and future portfolio holdings are subject to risks. In addition to the normal risks associated with equity investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from difference in generally accepted accounting principles or from economic or political instability in other nations. Narrowly focused investments and smaller companies typically exhibit higher volatility. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. These risks may be magnified further with respect to frontier market countries, which are a subset of emerging market countries with even smaller national economies. Real estate and REIT investments are subject to changes in economic conditions, credit risk and interest rate fluctuations.

Bonds and bond funds will decrease in value as interest rates rise. Investments in high-yield bonds can experience higher volatility and increased credit risk and risk of default or downgrade when compared to other fixed-income instruments. TIPS can provide investors a hedge against inflation as the inflation adjustment feature helps preserve the purchasing power of the investment. Because of this inflation adjustment feature, inflation protected bonds typically have lower yields than conventional fixed rate bonds.
